

Cubit Workstation 2, 4 & 6 raceway assembly instructions

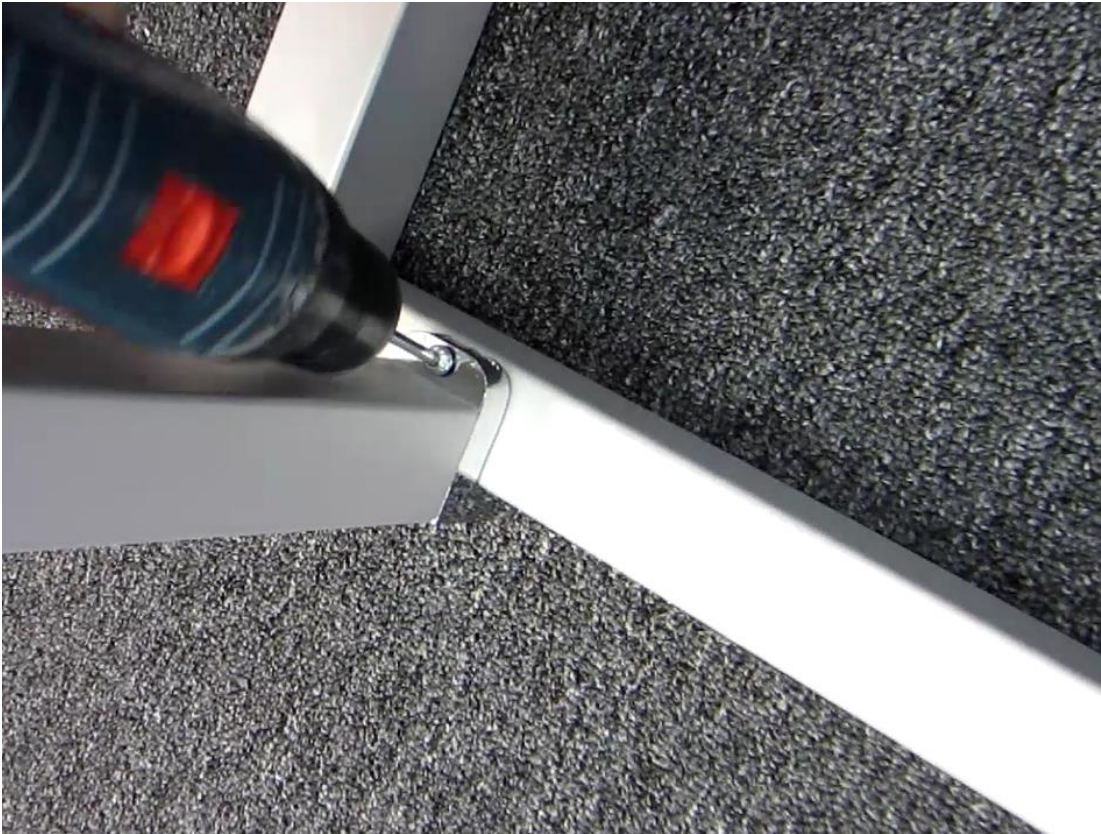

- 1) Please start with the end leg frames and the cross rails as pictured below, if you are assembling a 4 or 6 desk unit you will also have middle legs you will see the difference with these as they allow for the cross rails to attached to both sides when end legs only have attachment on one side.

- 2) Assemble the frame by attaching the cross rails to the end leg frames as per the below picture, these are the screws required from the top of the cross rail

Below are the screws that need to be fitted from the bottom of the cross rail to hold the rails in firmly

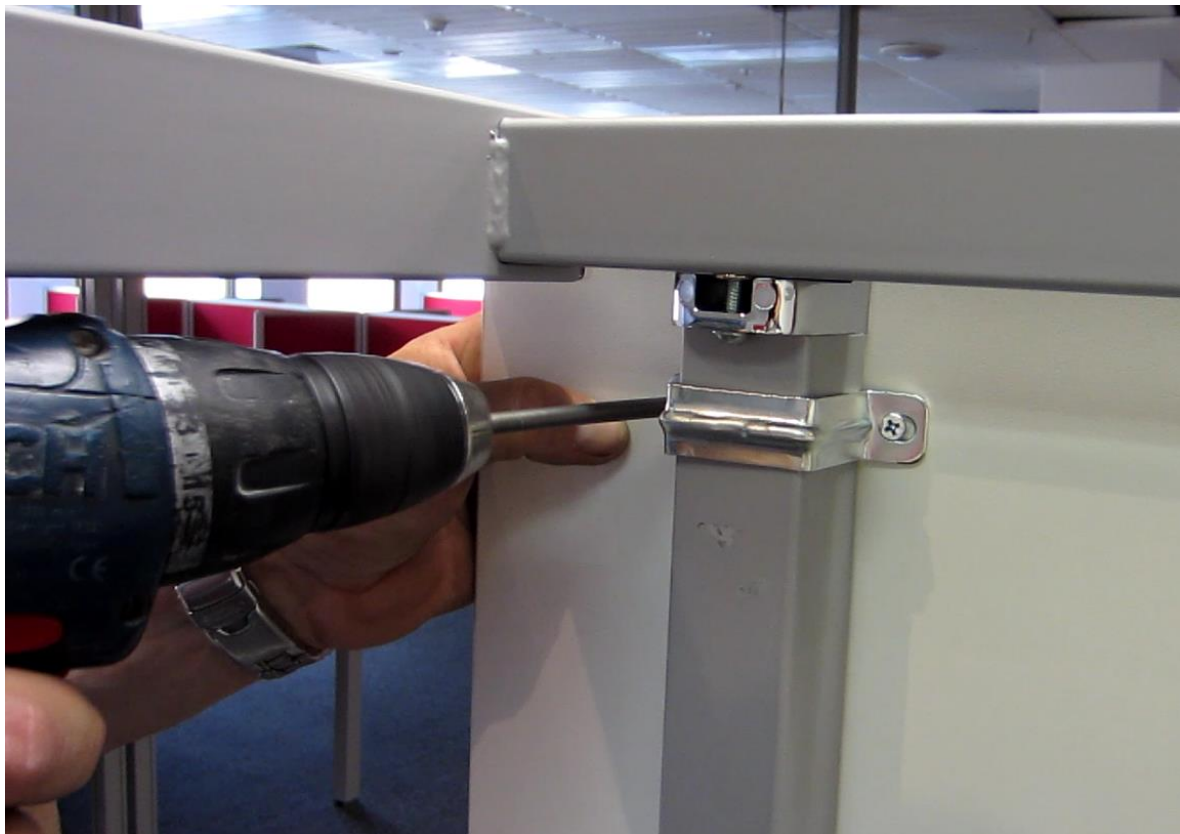

3) Once the frame has been assembled please check it for square, see the picture below checking 1 section of the frame for square before building the next section

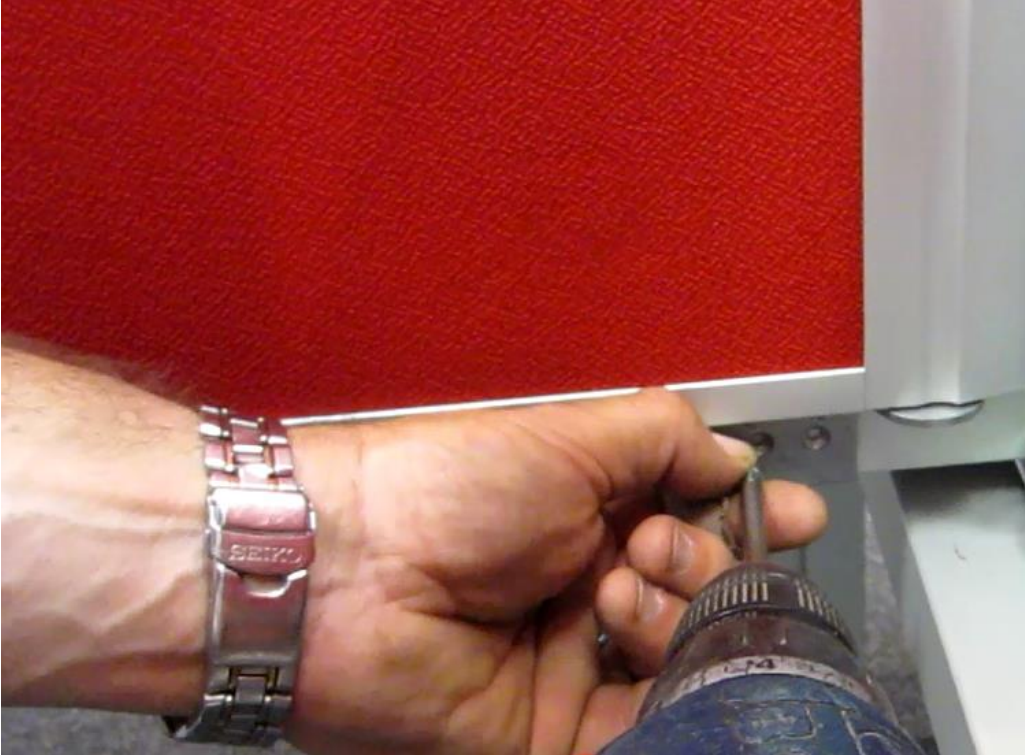

- 4) Once the frame is complete please put the desk top onto the frame and position it so that it lines up with the end legs correctly see the below picture:

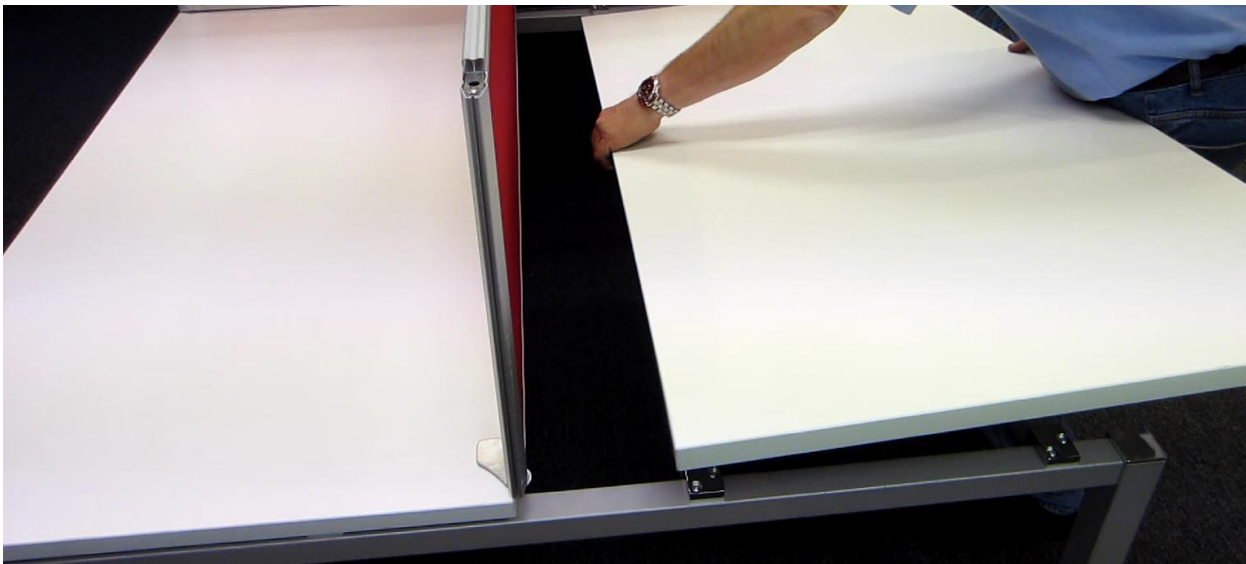

- 5) To fix the desk top to the frame you need to use the U shape metal brackets with the screws provided (please double check to make sure the screws are not too long for the top, you don't want them to go through the top) see the below picture showing how the U shaped brackets are fitted:

- 6) Now please fit the screen to the desk top before putting the next top on so that the brackets can be fitted into the first top that has been put into position like the picture below (for more information see the screen fitting assembly instructions)

- 7) Once the middle screen has been fitted the top on the other side of the frame can be fitted and fixed into place.

- 8) The first 2 desks are now complete, you just need to repeat the instructions for more desks.
